Autodesk App Store — Command Descriptions (Individual Rows)

> **Instructions**: Copy each Command Name and its Description into the individual rows on the Autodesk App Store submission form.

Rebar Panel (17 commands)

Command Name	Description
Design Rules	View design codes, reference parameters, and calculation rules
Pre-defined Shape	Load special rebar shapes (HT, L, LL, SP, CT) from the project library
Foundation Rebar	Parametric reinforcement for Strip Footings and Pad Footings
Wall Rebar	Parametric reinforcement for Walls and Wall Corners
Column Rebar	Parametric reinforcement for rectangular and circular columns
Beam Rebar	Multi-layer reinforcement for single and continuous beam spans
Rebar Palette	Floating toolbar with persistent rebar tools including Crank rebar and Split rebar
Q'ty Host Category	Rebar quantity summary grouped by host category (beam, wall, etc.)
Q'ty Host Mark	Rebar quantity summary grouped by host mark (element ID)
Q'ty Partition	Rebar quantity summary grouped by Rebar Partition parameter
Assign Mark	Auto-generate and assign a unique mark to selected elements
Create ElementName	Create a shared parameter to store a custom element name
Assign ElementName	Auto-generate and assign a custom Element Name to selected elements
Remove Extg Mark	Clear the mark value from selected elements
Remove Extg ElementName	Clear the 'Element Name' value from selected elements
Mark → Partition	Set each rebar's Partition to its host element's Mark value
ElementName →	Set each rebar's Partition to its host element's Element Name

ElementName → Partition	Set each rebar's Partition to its host element's Element Name value

Model Panel (4 commands)

Command Name	Description
Roof Framing	Generate purlin and rafter assemblies on roof or slab geometry
X-Brace	Crossed (X) diagonal bracing between two structural columns
K-Brace	K-shaped (chevron) bracing with a central apex point
H-Frame	Parallel horizontal braces spanning multiple structural bays

Project Audit Panel (6 commands)

Command Name	Description
Project Folder	Open file explorer at the central model location
Wipe Empty Tags	Delete all tags with blank values in the current view
Resolve Overlaps	Fix overlapping text notes and tags
Project TextStyle	Batch-align or convert text styles project-wide
Title on Sheets	Apply consistent title block naming across sheets
Load More Type	Add types to an already-loaded family

Overrides Panel (16 commands)

Command Name	Description
Dim Fake	Override dimension text with custom display values
Text Audit	Audit text elements for consistency
Text Upper	Batch-convert text to uppercase
CAD Black/Half/Trans	Black lines, halftone, transparent CAD preset
CAD Orange/Half/Trans	Orange lines, halftone, transparent CAD preset
CAD Blue/Half/Trans	Blue lines, halftone, transparent CAD preset
CAD Green/Half/Trans	Green lines, halftone, transparent CAD preset
CAD Purple-Blue	Purple-blue, hidden lines, halftone CAD preset
Project CAD Override	Apply saved CAD override across all views

60% Transparency	Set 60% surface transparency on selection
100% Transparency	Set full transparency on selection
Match Overrides	Copy graphic overrides from source to targets
Reset Selected	Clear graphic overrides from selection
Reset All Overrides	Clear all graphic overrides in active view
Disable Filters	Temporarily disable all view filters
Enable Filters	Re-enable disabled view filters

Management Panel (16 commands)

Command Name	Description
Family Manager	Selective family manager and transfer views/sheets across projects
Rename View	Rename viewports across all sheets using a naming rule
Rename (Override)	Strictly rename views to match Detail Numbers, resolving collisions
Renumber Viewports	Renumber viewports on the active sheet sequentially
Add Selected View	Place the selected view onto a chosen target sheet
Add Views	Batch-place multiple views onto sheets
Sheet Maker	Batch create or manage (rename/renumber) existing sheets
Auto Place Break line	Batch-place break line detail components at crop boundaries
Set Crop View	Set the crop region boundary interactively for the active view
Crop Region	Toggle crop region visibility for all placed views project-wide
Zoom To	Zoom the active view to fit the current element selection
Auto 3D	Create a 3D view auto-fitted to selected elements
Toggle 3D	Show or hide the section box in the active 3D view
Sectbox	Toggle section box visibility without resizing its bounds
Align Schematic	Align viewports to a consistent position across multiple sheets
IFC Cleaner	Purge and clean complex IFC files to prevent Revit from hanging

Visibility Graphic Panel (22 commands)

Command Name	Description

Command Name	Description
Quick Filter	Colour-code elements by parameter value
Highlight	Highlight selection, fade all others
Quick VG	Streamlined batch visibility toggle panel
Quick Pick	Category-based picker with custom favourites
Toggle All Elements	Master show/hide all categories
Toggle 2D Elements	Isolate annotation elements
Toggle 3D Elements	Isolate model categories
Toggle Structural Packs	All structural categories as group
Toggle Foundations	Foundation elements
Toggle Walls	Wall elements
Toggle Floors	Floor and slab elements
Toggle Columns	Structural columns
Toggle Framing	Beams, braces, trusses
Toggle Roof	Show or hide roof elements in the active view
Toggle Connections	Show or hide structural connection elements
Toggle Rebar	Show or hide reinforcement bars in the active view
Toggle Grids	Show or hide grid lines (2D and 3D)
Toggle Levels	Show or hide level datum elements
Toggle Ref Planes	Show or hide reference planes
Toggle Scope Box	Show or hide scope box elements
Toggle CAD Links	Show or hide all imported and linked CAD files
Toggle Revit Links	Show or hide all linked Revit models in the project

General Panel (26 commands)

Command Name	Description
Print PDF / CAD	Batch export sheets to PDF or DWG with automatic sorting
Allow Join (Selection)	Allow geometry join on selected elements
Allow Join (View)	Allow geometry join on all elements in the active view

Disallow Join (Selection)	Disallow geometry join on selected elements
Disallow Join (View)	Disallow geometry join on all elements in the active view
Beam Reset	Reset beam start/end extensions and justification to defaults
Join Advance	Toggle join/unjoin geometry between two selected elements
Cut Geometry	Use one element to cut all intersecting elements in its path
Flip Elements	Flip the facing or orientation of selected elements
Set Rev	Set selected revisions on selected sheets
Create Rev Set	Create a sheet set from sheets containing selected revisions
Copy Filters	Copy view filters from one view to multiple selected views
Filters Legend	Generate a legend showing all active filter colors and rules
Grid Bubble	Toggle grid bubble visibility or switch grids between 2D and 3D
Grid 3D & 2D	Switch selected grids between 3D and 2D extents
Rotate Multiple	Rotate multiple selected elements by a specified angle
Merge Regions	Merge multiple overlapping filled regions into one
Regions → Floors	Convert filled regions to floor elements
Regions → Ceilings	Convert filled regions to ceiling elements
Change LineStyle	Change the line style of selected filled region boundaries
Match Top	Match the top constraint of selected walls to a reference wall
Match Base	Match the base constraint of selected walls to a reference wall
Match Both	Match both top and base constraints to a reference wall
Modify Constraints	Manually set the top and base constraints for selected walls
Auto Dims	Auto-dimension grids, walls, columns, and foundations
Dim Audit	Find and fix overlapping or unreadable dimensions in the view

antiGGGravity Panel (3 commands)

Command Name	Description
Hardware ID	Copy your machine identifier for license activation
Request License	Fill in a simple form to request a trial or full activation key
Check Update	Check for new versions and download updates automatically
